

Incident Report

Incident Summary

A suspicious PowerShell execution was detected on the monitored Windows system through Splunk alerts.

The activity was flagged as potentially malicious due to unusual command-line usage and process behavior.

Date & Time

Date: 14-04-2026

Time: 17-06-2026

Affected System

Host: Windows Machine

Log Source: Sysmon

SIEM: Splunk

Detection Details

The alert was triggered using the following Splunk query:

```
index=main EventCode=1 CommandLine="*powershell*"
```

This query identifies PowerShell execution events captured by Sysmon.

Logs Generated

Log details screenshot

Investigation Steps

Verified alert in Splunk dashboard

Checked EventCode 1 logs for process creation

Analyzed command-line arguments

Identified PowerShell execution

Confirmed activity was part of simulated attack

Indicators of Compromise (IOCs)

Process: powershell.exe

Event ID: 1

CommandLine: Suspicious execution pattern

Impact Analysis

No real system compromise occurred

Activity was part of controlled simulation

Demonstrates potential attack vector

Response Actions

Alert successfully triggered

Activity logged and analyzed

No remediation required (lab environment)

Lessons Learned

PowerShell is a critical attack vector

Monitoring process creation is essential

Sysmon logs provide valuable visibility

Detection rules must be continuously improved

Final Status

✓ Incident detected

✓ Logs analyzed

✓ Alert triggered

✓ System behavior understood
